

Glass Type/Application	Amber glass. Pharmaceutical primary packaging for oralis and solid dosage, general technical applications.																																																																																
Physical Data (approx. value)	<table border="0" style="width: 100%;"> <tr> <td colspan="9">Coefficient of mean linear thermal expansion</td> </tr> <tr> <td colspan="9">α(20°C; 300°C) (ISO 7991) 7.7 10⁻⁶K⁻¹</td> </tr> <tr> <td colspan="9">Transformation temperature T_g (ISO 7884-8) 535 °C</td> </tr> <tr> <td colspan="9">Glass temperature at viscosity η in dPa·s</td> </tr> <tr> <td colspan="9">10¹³ (annealing point) (ISO 7884-4) 540 °C</td> </tr> <tr> <td colspan="9">10^{7.6} (softening point) (ISO 7884-3) 720 °C</td> </tr> <tr> <td colspan="9">10⁴ (working point) (ISO 7884-2) 1050 °C</td> </tr> <tr> <td colspan="9">Density ρ at 25°C 2.50 g · cm⁻³</td> </tr> </table>									Coefficient of mean linear thermal expansion									α(20°C; 300°C) (ISO 7991) 7.7 10 ⁻⁶ K ⁻¹									Transformation temperature T _g (ISO 7884-8) 535 °C									Glass temperature at viscosity η in dPa·s									10 ¹³ (annealing point) (ISO 7884-4) 540 °C									10 ^{7.6} (softening point) (ISO 7884-3) 720 °C									10 ⁴ (working point) (ISO 7884-2) 1050 °C									Density ρ at 25°C 2.50 g · cm ⁻³								
Coefficient of mean linear thermal expansion																																																																																	
α(20°C; 300°C) (ISO 7991) 7.7 10 ⁻⁶ K ⁻¹																																																																																	
Transformation temperature T _g (ISO 7884-8) 535 °C																																																																																	
Glass temperature at viscosity η in dPa·s																																																																																	
10 ¹³ (annealing point) (ISO 7884-4) 540 °C																																																																																	
10 ^{7.6} (softening point) (ISO 7884-3) 720 °C																																																																																	
10 ⁴ (working point) (ISO 7884-2) 1050 °C																																																																																	
Density ρ at 25°C 2.50 g · cm ⁻³																																																																																	
Chemical Resistance	<table border="0" style="width: 100%;"> <tr> <td colspan="9">Hydrolytic resistance</td> </tr> <tr> <td colspan="9">acc. to ISO 719 Class HGB 2</td> </tr> <tr> <td colspan="9">acc. to ISO 720 Class HGA 2</td> </tr> <tr> <td colspan="9">acc. to Ph. Eur. Type III</td> </tr> <tr> <td colspan="9">acc. to USP Type III</td> </tr> <tr> <td colspan="9">Acid resistance (DIN 12116) Class S2</td> </tr> <tr> <td colspan="9">Alkali resistance (ISO 695) Class A2</td> </tr> </table>									Hydrolytic resistance									acc. to ISO 719 Class HGB 2									acc. to ISO 720 Class HGA 2									acc. to Ph. Eur. Type III									acc. to USP Type III									Acid resistance (DIN 12116) Class S2									Alkali resistance (ISO 695) Class A2																	
Hydrolytic resistance																																																																																	
acc. to ISO 719 Class HGB 2																																																																																	
acc. to ISO 720 Class HGA 2																																																																																	
acc. to Ph. Eur. Type III																																																																																	
acc. to USP Type III																																																																																	
Acid resistance (DIN 12116) Class S2																																																																																	
Alkali resistance (ISO 695) Class A2																																																																																	
Chemical Content (components in approx. weight %)	SiO ₂	B ₂ O ₃	Al ₂ O ₃	Fe ₂ O ₃	Na ₂ O	K ₂ O	BaO	CaO	MnO ₂																																																																								
	67	5	7	2	12	1	<0.5	1	5																																																																								
	The heavy metal content for the elements lead, cadmium, mercury and hexavalent chromium is below 100 ppm																																																																																
Transmission (exemplary spectrum)
